Rod Hanger Project Tested July 2021

Daily our representatives are contacted about conducting a pull test in the New York City metropolitan area. On this July morning it was no different. Our resident pull test expert, Matthew Walker, grabbed his kit and reported for duty.

Per the clients request Matt would be pull testing anchors to failure in the new Facebook office building in downtown Manhattan. The great thing about Allfasteners pull testing service is that we test the product that was recommended by the engineer and then we provide a suggestion on how to get a better result.

For this pull test Matt suggested they use the 3/8 Rod Hanger for their overhead application. Once tested each anchor resulted in a pull-value of well over 2000lbs each.

Elated with the results that Matthew suggested, the customer was glad to switch over to the Allfasteners rod hanger for better pull values and overall strength of the fastening.

Allfasteners is happy to conduct pull tests in any location & for any fastener.
